

Леон Леонидович Воронин

(08.09.1938 - 20.03.2004)

Ушел из жизни крупный ученый и просто хороший человек Леон Леонидович Воронин. Он был из второго (1962) выпуска Блюменфельдовской кафедры биофизики на физическом факультете МГУ им. М.В. Ломоносова. Сразу после окончания МГУ пришел в Институт мозга РАМН. В 1966 году Леон Леонидович защитил кандидатскую диссертацию «Некоторые вопросы функциональной организации нейронов двигательной зоны коры бодрствующего кролика (Микроэлектродное исследование)», а уже в 1971 году – докторскую диссертацию «Нейрофизиологические механизмы пластических свойств корковых нейронов».

В его лаборатории «Нейронные механизмы синаптических процессов» впервые в России начали применять методы регистрации потенциала в конфигурации «целая клетка», были разработаны некоторые уникальные методы анализа электрической активности нейронов. В 2002 году лаборатория перешла в Институт высшей нервной деятельности и нейрофизиологии РАН.

Защита дипломной работы (1962), справа – тогда же с Л.А. Блюменфельдом.
